

Press Release

New version of netfiles data room now available

Indexing, new reports and other new functions

Burghausen, January 16, 2018 - netfiles GmbH, one of the leading providers of virtual data rooms in Germany, presents a comprehensive new development of the netfiles data room. The update, which is available to customers now, offers extensive new functions and improvements.

A key enhancement is the new functionality of automatic indexing of data room content and the option of using a customer-specific index or an industry standard index when creating a data room. With automatic indexing, documents are automatically provided with an index number for unique identification after uploading them into the netfiles data room. Optionally, documents that already had an index number in the file name before the upload can be automatically sorted into the index in the netfiles data room. In addition to this new function, an own customer specific index can now be uploaded and used as folder structure for the data room when creating netfiles data rooms. Alternatively, netfiles offers its own standard index for carrying out due diligence or for commercial real estate transactions by the Gesellschaft für Immobilienwirtschaftliche Forschung e.V. (Society for Real Estate Research).

Besides the new index functions, the current version of the netfiles data room offers further improvements and new functions:

- New reports provide netfiles data room administrators with detailed information about the number of logins, document views, downloads and Q&A questions of individual users and user groups. This allows a detailed analysis for examples of the bidding behavior in a corporate or real estate transaction.
- In addition to personal labels, data room users can now assign group labels to folders and files. Group labels are visible to all users in a selected user group.
- Data room exports can now be customized to include only data room contents and lists accessible to selected users.

Thomas Krempf, Managing Director of netfiles GmbH, on the new netfiles version: "netfiles is developed in close cooperation with our customers. As in previous versions, the selection and way of implementation of the new functions , were to a large extent determined by user feedback. This close cooperation with our customers is the key basis for the broad acceptance of the netfiles data room and the high satisfaction ratings from data room users".

About netfiles GmbH

netfiles GmbH was one of the first German companies to provide virtual data rooms. Over 15 years' experience have now established it as a leading player in this field. netfiles enables companies to share and exchange files securely, as well as providing a secure central online document management facility guarded by detailed access rights but permitting mobile access. Under this cloud-based solution, data can be shared simply and securely within a company or with customers and suppliers. Secure data rooms can also be set up for such applications as M&A projects, due diligence tests, asset transactions, board communication, property management and contract management.

Interested companies can test the netfiles data room free of charge and without obligation for 14 days: <https://www.netfiles.de/en/free-trial/>
