

Press Release

netfiles data room with modernized user interface and new document preview

Burghausen, March 1, 2022 – netfiles GmbH, one of the leading providers of virtual data rooms in Europe, presents a new version of its data room for secure data exchange and due diligence after extensive further development.

Effective immediately, the netfiles data room presents itself in a modernized and simplified user interface and offers a new document preview, which allows documents stored in the data room to be viewed directly in the web browser. The new document preview is based on state-of-the-art web technologies and offers users improved performance and, especially for PDF documents, enhanced functionality and comfort.

When redesigning the netfiles look and feel, special care was taken to ensure that users do not have to learn the application from scratch, but can still find the most important functions in the usual places. netfiles claims that a data room must be easy to use without extensive training, even by data room laymen, and has focused consistently on the user-friendliness of its application since the first version over 20 years ago.

About netfiles GmbH

With more than 20 years of experience, netfiles GmbH is one of the first and leading providers of virtual data rooms. netfiles enables companies to securely exchange data and provide centralized, secure online document management with location-independent access and detailed read and write access rights. With the cloud solution, data can be easily exchanged within the company or with customers and suppliers and secure data rooms can be set up for due diligence and meeting management (board communication).

Companies can test the netfiles data room free of charge and without obligation for 14 days:
